

# Alignment of National Standby Power Approaches *Moving Towards 1 Watt and Beyond*

19 to 21 October 2010

Tokyo Japan

Asia-Pacific  
Economic Cooperation

## CALL FOR PAPERS AND PRESENTATIONS

Dear Colleague

The APEC Standby Power Project is pleased to announce, "Alignment of National Standby Power Approaches – Moving Towards 1 Watt and Beyond". This notable and informative international conference, which has additional support from both the APP Standby Project and 4E Standby Annex, will be held in Tokyo, Japan from 19 – 21 October 2010.

We are now calling for conference papers and speakers to provide insight into both the technical and policy aspects of standby power. If you would like to participate in this exciting event, please forward a brief overview of your intended presentation, including the proposed title and topics to be covered to: [Melissa@maiconsulting.com.au](mailto:Melissa@maiconsulting.com.au) no later than 8 September 2010.

The themes of the Conference include:

- Network standby issues;
- The possibilities in low power components;
- Status of product development;
- Products available to assist standby power reduction;
- The State of Play – latest trends in standby power;
- Recent policy developments;
- Importance of all low power modes;
- Common principles and objectives that can be shared.

The Conference will conclude with a workshop allowing participants to discuss information presented in the previous sessions. This will result in the publication of both a standby policy and standby technology report, focusing on possible options and approaches that can be used to reduce standby power. The conference will be attended by delegates from APEC member countries, the APP Standby power project, IEA 4E Standby Annex, manufacturers, suppliers, government officials and other international experts in the field of standby power.

We look forward to hearing from you.
